

568B Wiring Example

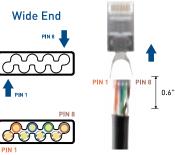

- Slide the strain relief boot onto the cable
- Secure with removable tape(Optional)
- Trim the cable jacket back about 1.5"
- · Carefully trim any foil shielding
- Cut the center spline, if needed
- · Straighten each twisted wire with the clipped cable jacket and move them to the side in pairs

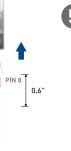

• Insert the wires into the load bar's wide end

• Cut the excess wires along the narrow

narrow end will be inserted first

• Orient the load bar to mate with the plug,

edge of the load bar

- Check that the cable jacket fits into the plug housing
- Attach the metal clip to the cable

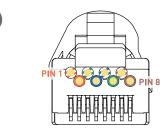

- Place cable into the crimper tool for metal clip clamping
- Do not damage the cable jacket

- · Use a crimp tool with a removable punch die so the housing is not pierced
- · Firmly crimp the connector

· Visually check that the wires are fully inserted, and the wires are not touching each other

- Pull the strain relief boot over the connector
- Note: Example is 568B wiring

Specifications

- Connectors: RJ45 Plugs
- Rating: Cat 6A
- Compatibility: Insulation diameter of single wire is 1.24~1.34mm, 21-23 AWG solid or stranded STP/FTP/UTP cable, maximum diameter of the outer protective sleeve is 7.15mm
- Warranty: Limited Lifetime

Suggested Tools

- Crimp tool for shielded RJ45 plugs with a removable die (SKU: 180124)
- Wire cutter (regular and flush)
- Cable stripping tool
- Needle nose pliers
